a comprehensive treatment of the subject of microscale inorganic chemistry is provided through 45 laboratory experiments these include experiments in main group and transition metal chemistry instrumental techniques kinetics synthesis and the manipulation of air sensitive material

when confronted with a problem in science the way to proceed is not always obvious the problem may seem intractable or there may be many possible solutions with some better than others problem solving exercises in green and sustainable chemistry teaches students how to analyze and solve real world problems that occur in an environmental context

the book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks it also discusses relevant but less frequently covered topics with chapters such as chemistry of longer wear and population and the environment this coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society copiously illustrated with over 800 figures this second edition provides an update from the frontiers of the field

this nuts and bolts book addresses specific waste minimization and pollution prevention techniques that work in specific types of laboratories for specific wastestreams concepts in the book may be directly applied to laboratory operations in addition the book illustrates other approaches to laboratory pollution prevention such as reducing wastewater discharges and fume hood emissions a wide range of waste types including hazardous infectious medical pcb and radioactive are discussed this book helps you to develop a broad institutional framework to plan and set priorities for pollution prevention it responds to your laboratory s critical need to have readily available techniques and concepts for waste minimization and pollution prevention

as a spectroscopic method nuclear magnetic resonance nmr has seen spectacular growth both as a technique and in its applications today s applications of nmr span a wide range of scientific disciplines from physics to biology to medicine each volume of nuclear magnetic resonance comprises a combination of annual and biennial reports which together provide comprehensive coverage of the literature on this topic this specialist periodical report reflects the growing volume of published work involving nmr techniques and applications in particular nmr

of natural macromolecules which is covered in two reports nmr of proteins and nucleic acids and nmr of carbohydrates lipids and membranes for those wanting to become rapidly acquainted with specific areas of nmr nuclear magnetic resonance provides unrivalled scope of coverage seasoned practitioners of nmr will find this an invaluable source of current methods and applications

interest in green chemistry and clean processes has grown so much in recent years that topics such as fluorous biphasic catalysis metal organic frameworks and process intensification which were barely mentioned in the first edition have become major areas of research in addition government funding has ramped up the development of fuel cells and biofuels this reflects the evolving focus from pollution remediation to pollution prevention copiously illustrated with more than 800 figures the third edition provides an update from the frontiers of the field it features supplementary exercises at the end of each chapter relevant to the chemical examples introduced in each chapter particular attention is paid to a new concluding chapter on the use of green metrics as an objective tool to demonstrate proof of synthesis plan efficiency and to identify where further improvements can be made through fully worked examples relevant to the chemical industry new and expanded research topics metal organic frameworks metrics solid acids for alkylation of isobutene by butanes carbon molecular sieves mixed micro and mesoporous solids organocatalysis process intensification and gas phase enzymatic reactions hydrogen storage for fuel cells reactive distillation catalysts in action on an atomic scale updated and expanded current events topics industry resistance to inherently safer chemistry nuclear power removal of mercury from vaccines removal of mercury and lead from primary explosives biofuels uses for surplus glycerol new hard materials to reduce wear electronic waste smart growth the book covers traditional green chemistry topics including catalysis benign solvents and alternative feedstocks it also discusses relevant but less frequently covered topics with chapters such as chemistry of long wear and population and the environment this coverage highlights the importance of chemistry to everyday life and demonstrates the benefits the expanded exploitation of green chemistry can have for society
